

MyHeritage Search Engine Library Edition

By: Daniel Horowitz - Daniel@MyHeritage.com - Twitter: [@MyHChiefGen](https://twitter.com/MyHChiefGen) - Instagram: [horowitz_daniel](https://www.instagram.com/horowitz_daniel)

MyHeritage main search page is used for global searches and looks like this:

The screenshot shows the MyHeritage SuperSearch™ search engine interface. At the top, it says "Welcome to SuperSearch™" and "11,937,384,837 historical records". Below this is a search bar with the text "Search all records" and a link for "Advanced search". The search form includes fields for "Name" (First and middle name(s) and Last name), "Year of birth" (with a "Calculate it" button), "Place" (Place of birth, or residence or other), and "Keywords" (with a note "Excludes records in 'US English'"). There are checkboxes for "Exact search" and "With translations", a "Clear form" button, and a "Search" button. On the right side, there is a "Categories" menu with options like "Browse Collection Catalog", "Census & Vital Lists", "U.S. Census", "U.K. & Ireland Census", " Nordic Census", "More...", "Family Trees", "MyHeritage Family Trees", "FamilySearch Family Tree", "Open World Family Tree", "More...", "Birth, Marriage & Death", "Birth Records", "Marriage & Divorce", "Death, Burial, Cemetery & Obituaries", "More...", and "Photos", "MyHeritage photos & more".

There is a lot of useful content on MyHeritage search engine for you to explore. To begin with, it includes MyHeritage family trees, photos and members that are public, billions of exclusive records from all over the world that, in most cases, are only available on MyHeritage.

MyHeritage search engine also contains the world's largest collection of historical newspapers, all the England and Wales census records from 1841 till 1952 and hundreds of millions of UK birth, marriage, and death records. We also brought over content from other excellent sites under license agreements, such as tombstone photos and transcriptions, to make it a one-stop search engine for historical records.

We're constantly adding new data, with at least one million historical records plus one million family tree profiles added each day. This means that even if you don't find what you're looking for on MyHeritage search engine, chances are we'll have it for you very soon.

Because MyHeritage search engine is international, it has content relevant to all countries, with strong data collections from the USA, UK, Ireland, Australia, and the rest of the world. We're rapidly expanding the data sets with the ambition to grow over time to be the largest worldwide collection of historical documents available online.

The results of this search demonstrate how it helps you grow your research.

Year: 1978
 Place: Lubbock, Lubbock, Texas 79407, USA
 Page: 92

The result page shows interesting and diverse content such as a gravestone photo from a cemetery in Ohio; a 1940 US Federal Census record; a Missouri Death Certificate; a California Death Record; an SSDI (Social Security Death Index) record; a MyHeritage family site where the site manager may be contacted; a Texas Tech University Yearbook where text and a picture of a swimming record in 1978 can be seen; a UK Marriage record from 1887, a newspaper article from the 1970's and many more results in the following pages. This could be solid gold for anyone researching this last name.

You can also view search results in Summary Mode which shows them grouped by collections. Click any collection to see its results. This mode helps you go over results systematically, by collection.

You can run an advanced search to increase flexibility. Here you can search by events (e.g. birth, marriage, death, immigration, and others), by relatives of the person you're looking for, as well as by keywords (also available in the basic search).

Sometimes you may not know the exact name of the person you're looking for, or that person may be found in historical records with a different spelling than the one you had in mind. Don't worry. When using MyHeritage search engine you can control how you'd like it to search names. It can match the name exactly or use the default setting that will automatically catch first name variations such as Bill and William; as well as likely last name variations. Separate matching options are provided for first names and last names in the advanced search form. This lets you run exact searches with pinpointed accuracy or cast a wide net to catch as many plausible variations as possible, to find those elusive ancestors whom you've never been able to find before.

The screenshot shows the 'Welcome to SuperSearch™' header with the tagline 'Search billions of records on MyHeritage'. Below this is a search bar with 'Search all records' and a 'Hide advanced search' link. The 'Name' section includes input fields for 'First and middle name(s)', 'Last name', and a 'Gender' dropdown menu set to 'Any'. Two 'Match similar names' dropdown menus are open, showing options: 'Match name exactly', 'Match similar names' (selected), 'Varying on spelling (e.g., John and Jan, Robert and Bob)', 'Matching initials (e.g., J and John)', and 'Names starting with letters (e.g., Jo finds Joshua)'. A 'Use default settings' link is also visible. The word 'Relatives' is partially visible at the bottom left.

MyHeritage search engine will even figure out the likely gender of the person you're looking for. So, if you search for a person called George, it automatically infers that you are searching for a male. Such automatic deduction of gender is among the many unique features not found in other search engines.

Once you receive results, you can refine them by

collection, or by names, places, and other common fields. This is called faceting and it is a very useful feature.

Keyword searches are often very useful because they cover many fields, so they can be used to look for a town or a person's occupation. Here is a keyword search within the MyHeritage photo collection for 'Wedding', which is useful for finding wedding photos, because it will look for the word 'Wedding' in titles and descriptions of photos. You can enhance this search by adding more criteria, such as the places and dates in which photos were taken.

MyHeritage search engine is an international search engine and with the location selector you can automatically focus your search on the continent, country, or state you are interested on. All records display from this search will be related to the place you selected, including the trees with events in this area as well.

Searching through international records, you will take advantage of information in 42 different languages with automatic translation technology. No other genealogy search engine supports so many languages, and our goal is not only to make it useful in your language, but also to add global content that will be useful for family history research in your country.
